KT0481 Series

6PIN LSOP IPM DRIVE PHOTOCOUPLER

Description

The KT0481 series fast speed photo coupler contains a LED and photo detector with built-in Schmitt trigger to provide logic-compatible waveforms, eliminating the need for additional wave shaping. The totem pole output eliminates the need for a pull up resistor and allows for direct drive Intelligent Power Module or gate drive. Minimized propagation delay difference between devices makes these phpto couplers excellent solutions for improving inverter efficiency through reduced switching dead time.
